

PEACE Soundbites

Smith Revenue Strategy's New Website Copy

PEACE SOUNDBITES

P → PROBLEM

Small business leaders are feeling the urgent pressure to remain competitive against companies who have more technology resources and have a fear of losing their edge and relevancy.

E → EMPATHY

With technology and AI having nearer daily transformations, we know the feeling of sifting through every vendor and every company touting "AI", which one is right for me can be a paralyzing question.

A → ANSWER

With a process improvement focused AI consultant supporting your vision, you'll know which steps make the most sense for you now and have the confidence to move forward to see your vision come to life, ensuring your business stays nimble and relevant.

C → CHANGE

Your team members will have new energy and optimism towards the future, and be more honed in on strategic targets than ever before.

E → END RESULT

Experience the power of a revenue engine that automates manual work and unlocks the full potential of your company's revenue while eliminating operating burden, surface insights to optimize ongoing investment, and reap the impact of your reward.

DECISION TRIGGER SOUNDBITE

If you believe leveraging modern technology with automation may help unlock your business vision, a visit with our team may be the best business decision of the year.

[REVIEW THIS interview clip of Mark Cuban and pick the most relevant comment to use as a call-out quote
[https://x.com/rock3t23/status/2046282654161727722?s=46\]](https://x.com/rock3t23/status/2046282654161727722?s=46)

Transcript:

Mark Cuban just described the largest wealth transfer of the AI era.

Almost nobody understood what he said.

Cuban: "There are 33 million companies in this country. Aren't going to have AI budgets. Aren't going to have AI experts."

Not tech startups.

The shoe store. The regional trucking outfit. The accounting firm with 12 employees.

The businesses that actually run the physical economy.

They know AI is coming. They have no idea what to do with it.

Cuban: "You've got the head of Microsoft saying software is dead because everything's going to be customized to your unique utilization."

Software is dead.

The SaaS era ran on one rule. Build a generic product. Force millions of companies to bend their workflows around it. Charge rent forever.

AI ends the contract.

The business stops bending to the software. The intelligence bends to the business.

But customized by whom.

The third-generation manufacturer cannot tell Claude from Gemini. The county hospital is staring at a reactor asking where the light switch is.

Cuban: "Who's going to do it for them?"

That question is worth more than the frontier models themselves.

Hundreds of billions are being burned to build the foundation. The smartest engineers alive are locked in a bloodbath over who owns the base layer.

Let them fight.

Let them burn the capital. Let them drive the cost of raw intelligence toward zero.

Because the wealth does not collect where the brain is built.

It collects where the brain meets the business.

Every ambitious kid in college right now thinks survival means a seat at OpenAI or Anthropic.

Cuban is staring at the other 99 percent of the economy.

Learn the models. Then learn the messy, unglamorous reality of how a 50-person company actually operates.

Walk through the door. Understand their problems. Wire the intelligence directly into their revenue.

That is not a job title. That is an entire economic class being born.

You do not need to build the brain. You need to build the nervous system.

The biggest winners of the electricity era were not the engineers who built the generators. They were the ones who walked into dark factories and showed the owners where to plug in.

33 million companies are standing in the dark right now.

Silicon Valley is racing to build the god. The fortunes will belong to whoever teaches him a trade.

"33 million businesses are not going to "buy AI". The only way this works is if it's packaged in an offer and wrapper they can

- 1. Understand*
- 2. Trust*
- 3. See fast measurable ROI*
- 4. Have a guaranteed easy entry and easy exit out of deal and tech*
- 5. Find a reason to actually want and need it*

Something missing from conversations is the customer experience?

How to help these businesses grow, better compete by providing a better customer experience?"

Steps to decide if this is right for my company

[Customer quote here]

Working together

What does it look like to open an engagement with SRS?

Our objective is to help our clients uncover a clear picture of business impact totaling 4x deployment costs within ~24 months*.

(*active revenue awards, indirect costs recovery from elevated labor capacity)

Is there a part of your workflow not, well... flowing?

Is it driving your team bonkers because of how administratively burdensome?

Are you training new hires on processes that are so illogical they feel like they've landed in a *'return to the past'* movie?

So disjointed across various log-ins that it should be deemed *immoral*?

What is it costing in turnover (and team morale)?

Is it a squeeze-point leading to missed-opportunity costs? Causing missed revenue or hesitancy from strategic revenue partners?

Our objective is to deliver value first, making it simple to know if we will be the partners you need.

Let's visit. [\[booking link\]](#) | [Working Together](#) | [Client Case studies](#)

Initial Consult - 30 min - Complimentary "Connect Call"

Workflow Assessment

Following the consultation, if there is a mutual fit, we will recommend one of our assessment options based on your project scope.

deserves a Light assessment or a Full Workflow Analysis and Process Deep Dive. (non-refundable, but if moving forward, applied to engagement)

- **a) Workflow Assessment**
- **b) Full Workflow & Analysis & Assessment**

Once the Workflow Assessment step is complete, our team goes back to the 'lab' and determines which steps can be...

- ★ *fully automated* (at night while your team sleeps)
- ★ *eliminated* (because they were unnecessary workarounds to begin with. Or they're no longer needed in the 'new way'. If these things were done to 'generate reports', we'll craft fitting delivery of time-specific insight or perpetual display in real-time so everyone's aligned on what's moving the needle
- ★ *greatly simplified* while still keeping a 'human-in-the-loop' ensuring strong buy-in and accountability in your operation

We deliver you...

Findings Summary & Value Assessment Presentation

The objective of the Workflow Assessment is to decide whether the outcomes desired could be achieved most directly with one of these three paths:

- ❖ **DIY:** If we determine you don't need us, we'll give you confidence to get what you're looking for – and fast. We'll link you with industry or solution experts who coach your team on change management, Organizational Development, etc. (Optional Support Tier)
- ❖ **Project-Based Retooling:** you've got the right instruments already. It's now time to orchestrate a harmonious song.

Solutions such as HubSpot or Salesforce; SDR/BDR or marketing tools such as Outreach, Salesloft, or other industry-specific outbound engagement tailored for platforms such as Autodesk/BuildingConnected/BidBoard Pro, etc. to drive maximum business outcomes

- ❖ **Custom Operational Solution.** This type of deployment will involve tailoring additional software solutions to your exact business parameters.
 - **client look-alike solution:** Bid Score Construction: build If it's an industry vertical we already have a, these projects and timelines are much leaner.

(Internal Note on Pricing: targets based on dev time at \$500-1,500/hr. Targets. Minimum 15k, target 25k). Billed 25% (non-refundable, Go/no-go), 25% Model Validation, 50% Go-Live with MVP gate.

- **built from scratch**: If it's an operational system that needs to be , all new integration/API designs and testing, expected deployments are 3 months with gates at monthly intervals. Both models have bi-weekly (tech review)
 - Monthly Consult to ensure timeline adherence, stakeholder and leadership change-

Once a project scope is completed, clients can shift into one of 3 support tiers:

Ongoing Advisory & Workflow Optimization Retainer

(See SRS Deck for the latest on this section)

Frequently Asked Questions

Who's a good fit for a Smith Revenue Strategy?

Consultants

Contractors

ideal customer profile ICP;

Privately held businesses with revenues ranging from \$500,000 to \$100 M.

What is your pricing model?

Every engagement starts with a consult, to discuss your situation, consider existing roadblocks and constraints, and

- A. Project-based work + Consulting
- B. Custom Solution Design/setup fee + ongoing support Tier (min. 6 month, At-will/adjustible following)
- C. Fractional Leadership.

FAQ and Common Objections

Our business is not structured enough/too messy to deploy custom software or agentic automation technology

- Matt: building out automations, even if you know of 1 repeatable task starts laying down the foundations to start automating and building structured procedures for other areas in the business.

How long do clients rely on your support tiers following a solution deployment or other Project-Based Retooling service?

(No clue)

When would my company be a right fit for automated workflows?

- Matthew: you tell me! If you don't want to automate repeatable tasks then you don't have to. Think of automation and AI assisted workforce as a way to supplement your current workforce - that way they can focus on what's really important and not the mundane.

Our business has too many nuances and how we operate to be able to use an automated technology system.

- Matthew: AI thrives in the nuance as it has near unlimited imagination as long as the driver has the vision. Therefore, if you have the vision, AI can be the excellent partner in bringing it out into reality.

The large language models simply aren't consistent enough and we can't afford to have hallucinations run our core business functions.

- Matthew: Predictions and Machine Learning can be inaccurate but that is generally avoidable during a curation phase. Humans have been known to be inaccurate as well. The benefit of the LLM is that you can be curating an

unlimited number of ML models and then seeing which one is most accurate for your intended purpose.

I don't want to send my business data off to the cloud or one of the model makers (like OpenAI/Anthropic/Google, etc.) to make money off of my business intel.

- Matthew: There are LLM solutions that are capable of being internal only. Not connecting to the internet. Along with a custom build application with LLM can all be internal. Generally, the cloud models trade off the infrastructure cost for subscription. The Cloud providers and model makers do offer private/non-used tenant spaces that allows your data to not be used.

I have concerns about the security risks of having agentic automation solutions or running large language models (LLM's) on my own server/hardware/network.

- Matthew: This is no different than current software solutions or current operating systems. There needs to be a security management strategy already in place so that when an LLM/AI is used then the same principles would be applied - see NIST CSF 2.0.

HI? L.?

My industry is heavily regulated and I have to follow too many compliance requirements to be able to use AI solutions in my business.

- Matthew: Most providers have compliance compliant tenant environments. For the LLM, hosting it local is also a capability, however, this does drive up infrastructure cost as mentioned earlier but you have full and total control of your data.

The software we use is very old and other vendors we've talked to have struggled to integrate with it or the integration expense was not justified by the outcomes we were expecting to come from it.

- Matthew: This is not a new problem. The build vs buy (rent) has always been there. Now, the shift to building is more obtainable. Rather than having to use a solution that inhibits revenue growth, then investing in a solution that is custom tailored to your environment provides more business and process control that influences efficient operations.

I can't justify the cost of building a custom solution because I see this technology becoming out of date every six months or so... I need a model agnostic solution for my business to remain relevant

- Matthew: Integration changes are rapidly evolving. We now have MCP along with APIs, which is a massive shift in how the industry will communicate. However, that doesn't mean everyone is going to adopt this new technology right from the start. Successful businesses are successful due to the processes that the people are successfully implementing. Technology is just a tool to assist in that process. Technology needs to be planned in a way that if there is another evolution then the product needs to be able to adapt to the changes quickly.

I don't have the time to stop and fine tune agentic automation to our unique business parameters and vertical specific nuances.

- Matthew: Managed Service Providers and Support contracts is not a new concept and it should be looked at in a way of what's best for your company. Some companies have the personnel to fine tune agentic automations while others are solo shops. The solution delivered needs to be built in a way where you don't need daily fine tunings.

I don't have highly technically inclined people on my team who can manage these tools if you were to set them up for us and leave them in our care.

Half our team can barely remember their password... I don't expect them to use any AI driven technologies day-to-day. (Change Management Consulting and ongoing support services)

We already have ChatGPT and Microsoft Copilot and don't use either one to their full capacity. Why should we expect to get more benefit from working with an AI consulting group now?

- Matthew: ChatGPT and Microsoft's Copilot are in an entirely different category for what is currently available in the market. Those are seen in the automation space as helpful LLMs to chat with and maybe look some things up. However, most of the tools that actually do the automated tasks, collaborate data, unify systems - are actually other tools that are hot swappable, but are driven by coding assistant solutions.

Leaders lose when they lead alone.
Join fellow peers ready to help you win.

About Page

ABOUT

One Liner

Rodney Smith

Workflow Automation & Revenue Consultant | Founder

I didn't set out to be a workflow consultant.

I've worked inside sales organizations that ran like a well-oiled machine—clear priorities, clean systems, aligned teams. Work moved forward. People had margin. There was energy at the end of the day.

I've also worked inside the opposite.

Layered approvals. Broken handoffs. Constant friction. Everything felt harder than it should be. And what stood out most wasn't just the business impact—it was what that strain did to people. You could feel it follow them home.

That contrast stuck with me.

I became convinced that how a business operates internally doesn't just affect performance—it shapes the lives of the people inside it. Their stress, their time, their presence with family... it's all connected.

That's why I do this work.

I help organizations remove friction, simplify workflows, and build systems that actually support the people using them. Not just so the business can grow—but so the people in it can breathe a little more when they walk through their front door at the end of the day.

Because better systems don't just build better companies.

They build better lives.

Internal-NEXT STEPS

Next Steps

ACTION ITEMS & NEXT STEPS

- ☐ Connect with DJ Tirpak with Pretzel Day (dj@pretzelday.com)
- ☐ Create New Logo & Brand Identity (colors, fonts, etc)
 - please model my website colors and themes after this few websites.
 - <https://x.ai/>
 - <https://terafab.ai/>
 -
- ☐ Update privacy policy for new site or use [Termaggedon](#)
- ☐ Choose who will design the site
- ☐ Send the website copy to the developer
 - Ping Sloan to send a Loom video with instructions (I'll do this as a 'thank you'!)

☐ Review & approve website design

☐ Publish and Celebrate!

Other items to consider:

☐ Review brand collateral (cards, swag, flyers, etc) to see what needs to get updated.

☐ Get new business cards printed?

☐ Update intro deck collateral as desired

☐ update slide structure for workflow assessment & value analysis demo deck collateral
